

Project Specifications:

Project Type: Renovation

Completion Date: 1999

Construction Cost: \$1,600,000

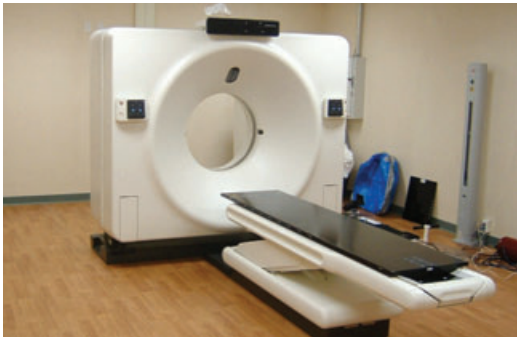

Size: 18,000 S. F.

Converting a furniture warehouse into a state-of-the art medical facility presented an interesting challenge. The existing warehouse had a three-story “high bay” area and 6,000 S. F. of floor space. Using the existing shell and adding two new floors within, allowed for a transformation resulting in more than 18,000 S. F. of floor space.

The Viewmont Imaging Center now contains physician offices, physical therapy areas, and a variety of diagnostic imaging services such as general radiology, fluoroscopy, MRI,

and a women’s center with mammography and ultrasound. All of the renovations and newly created space fully comply with current healthcare codes and regulations. Although the facility accommodates the high tech world of modern diagnostics, the completed design is very sensitive to the needs of the patients who visit. The beautiful and soothing interiors and functional design provide patient comfort, convenience and confidentiality.
